*HistoricFit*  
SERIES

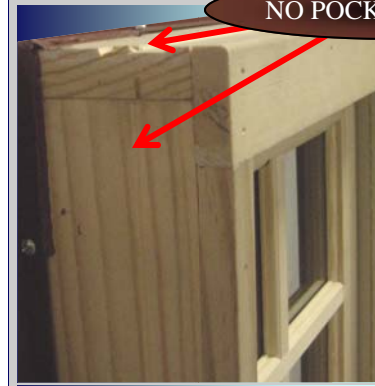

## MAIN FRAME

POCKET BOARD

Classic Fit has a pocket board on the main frame. The pocket board is found on both jambs and the header, but not on the sill.

NO POCKET BOARD

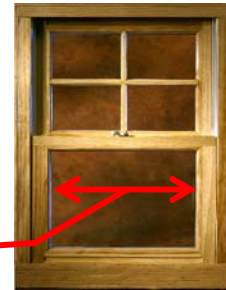

Historic Fit has no pocket board around the main frame.

## VIEWING AREA

There is less viewing area on the Classic Fit. This is because the pocket boards add 1" to the window width and 1/2" to the window height. This additional space taken up by the main frame means a smaller daylight opening.

DAYLIGHT OPENING

Without a pocket board, there is less main frame and more glass space thus the daylight opening on the Historic Fit is larger.

## HISTORICAL USAGE

The Classic Fit lacks the necessary structural designs to be used in historical replication projects.

The Historic Fit **IS NOT** an historically-approved product. However, the Historic Fit's design has allowed it to be used in several historical replication projects, satisfying the National Park Service's requirements for historical correctness.

## SPECIAL OPTIONS

The following options are available for both Classic Fit and Historic Fit series.

BRICKMOLD

NO FINGER PLOUGH ON TOP &/OR BOTTOM SASH

HALF SCREEN

LIFT ASSIST HANDLE IN PLACE OF FINGER PLOUGH
